

Figure 1

U.S. soldier acquired leishmaniasis while on active duty
|
Strain WR2334 was isolated from the U.S. soldier's dermal lesion
|
Strain WR2334 characterized as *Leishmania (Viannia) guyanensis*
by isoenzyme analysis
|
Strain WR2334 was biologically cloned by limiting dilution and microscopic visual inspection of
a single promastigote to yield WR2334 Clone D2 BPR nGMP2334-RS
|
GMP Master Seed Lot (MSL) and Primary Stock Culture of WR2334 Clone D2 produced,
banked and tested BPR nGMP2334-RS
|
GMP Production Seed Lot (PSL) from the RSL produced, banked and tested
BPR 377-00 Lot No. 0705
|
Fermentation : Bulk Lot Promastigotes (BLP) produced under cGMP starting from the PSL BPR
383-00 Lot No. 0707
|
Purification: Production of Drug Substance – Microfluidized BLP, centrifuged,
0.22 u sterile filtered, heat-treated and formulated BPR 389-00 Lot No. 0716
|
Vialing and QC Testing of Drug Substance and QA quarantine of Lot No. 0716
